

ABSTRACT

SUR
A1

5 ~~An apparatus for preparing dialysis liquid which~~
includes a container holder 112 for holding a container
102 in the inverted state, the container having a tubular
body portion which defines an internal volume for
accommodating powder preparation for preparing dialysis
liquid, a bottom wall defined at an end of the tubular
body portion, and a sealing member for closing an outlet
10 opening defined at the end of the tubular body portion
opposite to the bottom wall, a cutter 118, movable toward
and away from the sealing member, for cutting the sealing
member, a concentrated liquid tank 114a provided under
the container holder 112, a mesh member 116 ,
15 horizontally disposed above the tank, for receiving the
powder preparation which has fallen from the container
102, a nozzle 120 for applying water to the powder
preparation, for preparing dialysis liquid, which has
fallen on the mesh member from the container after the
20 sealing member is cut by the cutter 118. The water is
applied to the powder preparation for preparing dialysis
liquid dropped on the mesh member to produce a
concentrated liquid for the dialysis liquid, which is
received in the concentrated liquid tank 114a, and the
25 ~~concentrated liquid is diluted with a diluting water as~~
~~it supplied to the dialyzer 160.~~
